

Project Milestone 1

Team Number: 102-3

Team Name: CoderZz

Team Members: Enrico Blackwell, Sayed Abdulmohsen Alhashemi, Henry Scott, Evan Swett, Julian Abam

Application Name: Sports Doc

Application Description: This application serves the purpose of giving sports fans the opportunity to test the odds of their favorite stars going head to head with one another. With our huge database of athletes and their statistics, fans can pick the player, and their statistics of that year along with a competitor and study the odds of which player would beat the other in a 1v1 matchup.

Vision Statement: For sports fans who want to have all the statistics of their favorite teams in one centralized place. Sports Doc is a web dashboard that gets data from other APIs and displays the info in a pretty and practical way. Unlike [sports-reference](#), our app will look very modern and can display the data so that it is way easier to read.

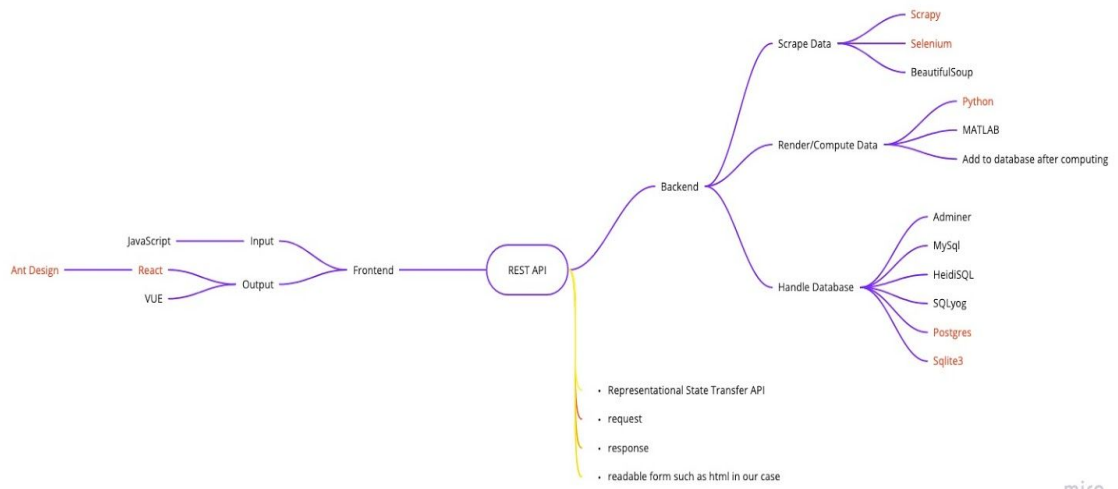

Version Control: https://github.com/CSCI-3308-CU-Boulder/102_3_F20

Development Method: Currently, we are still working on getting a main development method since this is our first time getting to choose what we want to work with so we want to explore the options we have. In the meantime, we are going to try out GitHub Projects on the repo that our TA gave us: https://github.com/CSCI-3308-CU-Boulder/102_3_F20/projects/1

Communication Plan: Our meeting time is 3-5 on Thursdays or right after the main recitation that same day. We are using Discord to share links and info while also using their voice/video chat for our team meetings.
